Web Server

Cache me until I
am 6 weeks old.

Cache me
for 1 week.

Do not
cache me.

Web page
files with
caching and
expires
headers

Web Server Add-in

1 User clicks a link or types in a URL. The request goes to the Web Server.

2 The IntenseSpeed Web Server Add-in modifies the requested file headers, adding caching and expires information.

3 The Web page files (with caching and expires headers) are sent back to the browser.

4 The browser saves a copy of each file to be cached in its cache, and displays the Web page.
